ICPSR PROCESSING NOTES FOR #30943
American Housing Survey, 2009: New Orleans Data

Part 6: Person Record

1) **Dataset Merging: CONTROL** is a 12-digit variable unique to each housing unit in the New Orleans survey data. This variable is the control code for the housing unit. Please see the "Sample status, weights, interview status" section within Original P.I. Documentation (AHS Codebook) for further information.

2) **Undocumented Codes:** The variables **JSAL** and **JPVOTHER** contain undocumented values of "4" which ICPSR has labeled "UNDOCUMENTED CODE." No information was provided.

3) **Stata Limitations:** Due to Stata limitations, many character variables throughout the dataset do not contain value labels within the Stata file.

4) **Documentation Discrepancies:**

   a) Users should note that in the Original P.I. Documentation (AHS Codebook), the ranges for the variables **MOVE** and **INUSYR** go up to 2007, however in the data they go up to 2009. No additional information was provided.

   b) The value labels for many of the "cold deck allocation" variables (i.e. **JATVTY**, **JNUSYR**, **JMOVE**) are reversed between the data and the Original P.I. Documentation (AHS Codebook). Please refer to Appendix D in the AHS Codebook for further information.

   c) Many variables, such as **ODIN**, **PMSA**, **COUNTY**, **BEDX**, and **HALB**, are mentioned in the Original P.I. Documentation (AHS Codebook) but are not present in the data.

5) **Additional Information:** For additional information about the American Housing Survey Series, including comparison charts, help guides, and more please refer the HUD USER Web site and the United States Census Bureau Web site.

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

Person Record

SMSA: 1980 design PMSA code

1980 design SMSA code used to uniquely identify each MSA [Note:] 9999 code not present in MSA files. Codes 9991-9993 are used for a few cases in 1995N and 1999N, where rare combinations of SMSA and METRO prevent us showing exact metro codes. See http://www.census.gov/hhes/www/housing/ahs/metrodates.html for a list of which metropolitan areas are included in each metropolitan survey. As a supplement to the national survey, the 1995, 1999, and 2003 National data include extra cases to allow separate analyses of 6 areas: Chicago (0620, 1600, 3965, 9991), Detroit (2160), Los Angeles (4480), New York (5380, 5600, 9992), Northern New Jersey (0875, 3640, 5015, 5190, 5640, 8480, 9993), and Philadelphia (6160). All cases within these 18 MSA codes are covered, except Joliet City outside Chicago, and non-urbanized

PLINE: Line number of person - 1

Line number of person [Note:] The householder is not necessarily the first member listed for the household or even the person with the lowest PLINE value. The householder is determined through the REL variable. REL values of 1 or 2 identify the householder. If using single file version of AHS, this variable becomes: PLINE1-PLINE16 Information for PLINE1 variable (head of household) is also stored in: HHPLINE
